

CS 320: Team 10

Postmortem Analysis

Members: Ngan, Gayatri, Arkar, Vidhi

Manager: Vidhita Mittal

API Design

- Endpoints planned well
- Routes followed consistent structure
- Behavior clear for frontend use

Testing

- Planned well
- API, controller, service, route tests had clear pattern
- Testing improved confidence in new features

Code Organization

- Controllers, services, routes separated cleanly
- Project structure was understandable overall

Team Workflow

- Team members contributed across multiple features
- Collaboration helped refine implementation details

Requirements

- Feature ideas matched marketplace needs (use cases)
- Scope for each release became more organized

What We Did Well

What Can Be Improved

Documentation

- Initial sprint documentation before release 1
- Improve clarity on task ownerships
- Refinement of deadlines in earlier releases

Technical Depth

- Better understanding of Github
- Tests affecting production DB
- DB Migration

- Backend-frontend coordination
- Product specifications, team availability
- clarified overtime

Communication

- Share URL Link
- Like Button
- Built-in Integrated Map
- Proximity Calculation

New Features
